

Geology of Weymouth, Portland, and coast of Dorsetshire, from Swanage to Bridport-on-the-Sea; with natural history and archaeological notes

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1884 Excerpt: ...one or two species. *Vermicularia concava*, Sow. Notwithstanding the small number of species referred to the Greensand of this district, it is in some places distinguished both for the number as well as for the beauty of its fossil shells, 150 species being recorded from the Blackdown Hills alone. Like the Chalk, the Greensand of Dorsetshire presents many high and insulated masses intersected by valleys and plains. CHLORITIC MABL. As the Upper Greensand passes insensibly into marly chalk, so the latter graduates into the Lower Chalk. The Chloritic Marl was formerly assigned to the Greensand series, but is now included with the Chalk. At the White Nore it forms the base of that formation. It is generally of a grey or pale-yellow tint, occasionally greenish, arising from particles of Green Earth (Glauconite), which assimilates it to the beds of Greensand beneath. Small grains of white quartz characterise this stratum, and impart to it a degree of hardness sufficient for architectural uses. The Chloritic Marl is remarkable not only for the number of its organic remains, but for their interesting and singular character, many of which are peculiar to this formation and have no counterpart in existing genera. Fossils from the Chloritic Mael Of White Nore, generally from the surfaces of large blocks on the shore, recently dislodged from the cliffs above:--Fish-teeth and Coprolites. *Ammonites varians*, Sow. *Nautilus Icevigatus*, DOrb. *Turrilites costatus*, Lam. *Scaphites cequalis*, Sow. *Hamites Baculites*. *Pleurotomaria depressa*, Sow. *Natica Avellana*. *Vnicardium Terebratula semiglobosa*, var. *subundata*. *Holaster subglobosa*, Dixon. Abundant. *Discoidea*

subuculus, Leske sp. Micraster (Upatungus). Galerites castanea, Forbes. Recently there has been a landslip at the White ...
