It has an upstream rotating compressor coupled to a downstream turbine, and a combustion chamber or area, called a combustor, in between. The basic operation of the gas turbine is similar to that of the steam power. His design used a small turbine wheel, driven by exhaust gases, to turn a **Global Construction and the Environment: Strategies and Opportunities - Google Books Result** The Gas Turbine Progress in the Design and Construction of Turbines Operated by Gases of Combustion (English) - Buy The Gas Turbine Progress in the **Combustion chamber - Wikipedia** Gas Turbine Low Calorific Value (LCV) Fuel Capability and Experience. 1 in design, construction or operation totaling more than 3 GW combustion systems employed by GE have been modified to composition of very low calorific value gases such as blast ..
